

# CABINET MONITOR SENSED DEFROST

## ECCA

Type ECCA is a unit suitable for monitoring up to 3 refrigerated display cabinets. The unit monitors cabinet temperature by measuring two air temperatures.

Defrost detection is by a probe mounted on the suction line (which must be common to each cabinet monitored by the unit).

The unit detects and indicates high temperatures. The alarm levels and the alarm response time are adjustable. High temperature alarms are cancelled during defrost.

Type ECCA provides comprehensive alarm reporting, data-logging and remote access when connected to a JTL communications Unit.

Type ECCA can detect defrost by a rise in temperature on the suction line or by voltage free contact input.
