

Offering an in depth JTL Product overview for Maintenance and Service Engineers

JTL Systems' refrigeration, monitoring and control systems are now a critical part of many supermarkets, convenience stores, forecourt shops, food manufacturers and cold storage applications. They are sophisticated systems offering many benefits to the installer, user and contractor.

Refrigeration professionals required to work with these systems need a solid foundation and expertise in refrigeration control and alarm systems.

Our courses provide a good understanding of how JTL network products work, the implementation of a system and how to maintain them.

Who should attend?

- Project Engineers
- Installation and Commissioning Engineers
- Service Engineers and Managers
- Consultants
- Electrical Contractors

Training Courses Available

JTL Product Training Course - 1 day

Overview This course covers installation methods and standards and commissions of controllers, including use of both hand operator and PC interface commissioning tools.

The course fee includes lunch and refreshments, and each delegate will receive a training manual, set of JTL product item number books and an Engineer's keydisk.

For further details on this course, please see over page.

Operator Training Course - 1 day

Overview This course covers the use of SiteEngineer - the JTL PC based remote access software package, and is aimed at assisting service call supervisors in using the dial-up software to diagnose problems and prioritise calls.

For further details on this course, please see over page.
