<b>2. INPUTS &amp; OUTPUTS</b>						
Physical and logical inputs are normally the same except when inputs are forced. In this case the physical inputs report inputs that are physically present, and the logical inputs report the forced input value.						
Physical and logical outputs are normally the same except when outputs are forced. In this case the physical outputs report the outputs forced value (ie, which relays are actually turned on) and the logical outputs reports the unforced command state.						
Note: If more than one input is present, the numbers shown in brackets are added together and displayed instead.

<b>4. DIAGNOSTIC &amp; TEST FUNCTIONS</b>						
			Forced functions remain forced if the Maintenance Unit remains plugged in. They are automatically cancelled 30 minutes after the Maintenance Unit is unplugged.
