 5.1 LEGACY DIAGNOSTIC & TEST FUNCTIONS ..... 4

JTL PLANT INTERFACE ITEM NUMBERS					IF67	
ITEM	DESCRIPTION	CODE	CODE MEANING	BIT	RANGE	ITEM 9 VALUE
				4321		
<b>1. NETWORK IDENTIFICATION</b>						
0	Unit type	IF67	Unit type			
19	Firmware version number					
30	Modbus device address (see user guide)	1-254	Modbus address (0=invalid)		0 - 254	
<b>1.1 LEGACY NETWORK IDENTIFICATION</b>						
Note: These item numbers are only relevant for legacy use (non-modbus) with older JTL Controllers (Item 37 J.PL.1 or J.PL.2) see userguide.						
31	Channel 1 interface type NOTE: Interface type must be configured according to intended function; (see user guide)	4 7	Condenser and defrost control Compressor control with analogue output		0 - 15	
30	Channel 1 interface number (see user guide)	0 1	Condenser control (item 31=4) Compressor boards		0 - 254	
41	Channel 2 secondary interface type (see user guide)	4 7	Condenser and defrost control Compressor control with analogue output		0 - 15	
40	Channel 2 secondary interface number (see user guide)	0 1	Condenser control (item 41=4) Compressor boards		0 - 9	
<b>2. INTERFACE PARAMETERS</b>						
37	Communication protocol	0 b.ASC 1 J.PL.1 2 J.PL.2 3 b.rtu	Modbus ASCII JTL plant zone - channel 1 only JTL plant zone - channel 1 & 2 Modbus RTU		0 - 3	3
36	Communication speed	1 1.2 2 2.4 3 4.8 4 9.6 5 19.2	1200 baud 2400 baud 4800 baud 9600 baud 19200 baud		1 - 5	4

<b>3. INPUTS &amp; OUTPUTS</b>						
Where segment patterns are shown, the vertical segments of the LCD display are used to represent visually the states of the inputs or outputs. Input/Output 1 is always on the right. Low segments mean denergised high segments mean energised.						
32	Channel 1 analogue output backup	0 - 100	%		0 - 100	0
33	Channel 2 analogue output backup	0 - 100	%		0 - 100	0
35	Relay state during backup Binary sum of energised. Example: To energise relays 1 & 4 during backup set value of 9.	0 - 15	Relay 1=1 Relay 2=2 Relay 3=4 Relay 4=8		0 - 15	0
61	Outputs	0				
		1				
		2				
		4				
		8				
62	Inputs	0				
		1				
		2				
		4				
		8				
111	Channel 1 temperature	-45.0 to +150.0	Temperature in degrees C			
121	Channel 2 temperature	-45.0 to +150.0	Temperature in degrees C			
131	Channel 3 temperature	-45.0 to +150.0	Temperature in degrees C			
141	Channel 4 temperature	-45.0 to +150.0	Temperature in degrees C			
151	Channel 5 temperature	-45.0 to +150.0	Temperature in degrees C			
161	Channel 6 temperature	-45.0 to +150.0	Temperature in degrees C			
171	Channel 7 temperature	-45.0 to +150.0	Temperature in degrees C			
<b>3.1 LEGACY OUTPUT DATA</b>						
34	Number of steps for analogue output to be 100%	99 - 127	Number of steps for 100% of output		99 - 127	99
38	Channel 1 secondary relay switch off threshold	0 - 100	% of full analogue output		0 - 100	0
39	Channel 1 secondary relay switch on threshold	0 - 100	% of full analogue output		0 - 100	80
48	Channel 2 secondary relay switch off threshold	0 - 100	% of full analogue output		0 - 100	0

JTL PLANT INTERFACE ITEM NUMBERS					IF67	
ITEM	DESCRIPTION	CODE	CODE MEANING	BIT	RANGE	ITEM 9 VALUE
				4321		
49	Channel 2 secondary relay switch on threshold	0 - 100	% of full analogue output		0 - 100	80
<b>4. RESTORE FACTORY DEFAULTS</b>						
9	Set default values	1234	Load default settings			
<b>5. DIAGNOSTIC &amp; TEST FUNCTIONS</b>						
<p>Forced functions remain forced if the Maintenance Unit remains plugged in. They are automatically cancelled 30 minutes after the Maintenance Unit is unplugged.</p> <p>Physical and logical inputs are normally the same except when inputs are forced. In this case the physical inputs report inputs that are physically present, and the logical inputs report the forced input value.</p> <p>Physical and logical outputs are normally the same except when outputs are forced. In this case the physical outputs report the outputs forced value (ie, which relays are actually turned on) and the logical outputs reports the unforced command state.</p> <p>Note: If more than one input or output is present the numbers in brackets are added and displayed instead.</p>						
100	Input status (Physical)		Segment pattern as Item 62			
71	Input status (Logical)					
73	Relay output status (Physical)		Segment pattern as Item 61			
72	Relay output status (Logical)					
101	Test relay outputs	0 1	Normal operation Test in progress		0 - 1	
78	Force inputs (See item 100)	0 1 - 15	Not forced Force inputs to read value		0 - 15	
79	Force relay outputs (See item 73)	0 1 - 15  128	Not forced Force outputs to read value All outputs off		0 - 128	
10	Processor Alarms	0 32	No alarms NVRAM fault			
51	Channel 1 DAC data	0 - 4095	DAC raw value			
52	Channel 2 DAC data	0 - 4095	DAC raw value			
53	Channel 1 Analogue output	0 - 100.0	% of full analogue output		0 -100.0	
54	Channel 1 Analogue output	0 - 100.0	% of full analogue output		0 -100.0	
21	Channel 1 Raw ADC Value	0 - 4095				
22	Channel 2 Raw ADC Value	0 - 4095				
23	Channel 3 Raw ADC Value	0 - 4095				
24	Channel 4 Raw ADC Value	0 - 4095				
25	Channel 5 Raw ADC Value	0 - 4095				
26	Channel 6 Raw ADC Value	0 - 4095				
27	Channel 7 Raw ADC Value	0 - 4095
